

S100 / OPMI pico

OPMI pico from ZEISS
Performance you can trust

Keeping you focused on what matters most

Whether for ear, nose or laryngeal procedures, ENT specialists around the world put their trust in the premium optical performance and proven quality they have come to expect from ZEISS for their daily work.

OPMI® pico from ZEISS offers the clarity, usability and quality you require by combining legendary ZEISS optics with user-friendly features in a compact and robust design.

From examinations to minor outpatient surgery, ZEISS OPMI pico lets you focus on what matters most – your patient.

ZEISS OPMI pico

Performance you can trust

Clarity you can see

ZEISS OPMI pico brings fine structures and details into clear view. Leading-edge visualization technologies such as LED illumination and Varioskop® 100 deliver clear visibility. More importantly, they help you to perform high-quality examinations, treatments and small outpatient surgeries with a high level of consistency.

ZEISS OPMI pico

Performance you can trust

Halogen illumination for standard applications

LED illumination for enhanced visibility

True colors

By providing well-distributed, true-to-color light that strongly resembles natural daylight, LED illumination enables better differentiation of anatomical structures and vessels – even in deep and narrow channels – in a much brighter and clearer way than halogen illumination. Virtually maintenance-free, there is no need to replace light bulbs, thereby helping to reduce costs.

Adjust the focal length during surgery with the Varioskop 100

Enhanced visibility

Apochromatic ZEISS optics and coaxially aligned illumination help to support enhanced visibility through narrow and deep channels. In addition, the Varioskop 100 objective lens provides a large field of view while also enabling fine focus within the region of interest – without moving the surgical microscope. Maintain your ideal ergonomic position by selecting a preferred working distance for ear, nose or laryngeal procedures using the positionable adjustment knob.

Usability you can feel

ZEISS OPMI pico is equipped with a user-optimized design and intelligent functions. Smart design elements such as the fully integrated HD video chain and a sensor-controlled stand-by position enable a streamlined clinical workflow. Experience a compact design and ergonomic functions in your daily work.

ZEISS OPMI pico

Performance you can trust

Always ready to go when you are

Ready to use

As a highly maneuverable manual surgical microscope, ZEISS OPMI pico is easy to use and position. Its simple, integrated design enables fast setup and easy maintenance. When moved from the stand-by position, the light and integrated HD camera are directly available for use.

Share your views in high resolution

Impressive HD quality

Utilize images to visually walk your patients through the procedure or simply share your expertise with colleagues. The integrated HD video camera delivers 1080p high-definition images with high color fidelity. Conveniently capture your images during treatments or surgical procedures with a foot control panel to further enhance your workflow.
